

**O**ur company has been in the business of seamless gutters for more than 50 years. With Leafaway, you will receive the benefit of rigid corporate standards, superior workmanship and excellent customer service.

### PROFESSIONAL LEAFAWAY GUTTER INSTALLATION

Our professional installation crews custom cut your gutters on-site with our Leafaway mobile gutter machines. Its breakthrough seamless, one-piece design provides optimal performance and visual appeal.

Leafaway gutters are installed without driving nails or screws into your roof and without lifting your shingles so not to void your roof warranty. Our gutter protection system is screwed to the fascia board with internal hanging brackets, unlike conventional gutters that are attached with spikes and can come loose.

©2015 Leafaway® Gutter Protection System · Patent #8925253

# THE ULTIMATE IN GUTTER PROTECTION

[www.leafaway.com](http://www.leafaway.com)

# CLEAN, SIMPLE AND WORRY-FREE... LEAFAWAY GUTTER PROTECTION!

Our bracket supports the gutter top and bottom, which helps prevent sagging, giving it a more streamlined look.

## THE DANGERS OF CLOGGED GUTTERS

Birds, insects and rodents love to settle in neglected gutters. Open gutters with dry debris can be a fire hazard. Leafaway's small opening in the top allows water to filter through while preventing these pesky creatures from getting too close to your home therefore reducing flammable debris. Leaves and other debris will pile up and eventually clog gutters and downspouts, causing rainwater to flow over the gutters. This can lead to:

- Ground erosion and water drainage problems.
- Foundation problems and flooding.
- Damage to fascia.
- Climbing ladders to clean out gutters can be dangerous.
- Unsightly clogged gutters that detract from the appearance and value of your home.

## HOW LEAFAWAY WORKS

The Leafaway Gutter Protection System is a revolutionary leaf and debris shedding system. The one piece, seamless design works on the principle of liquid adhesion. Rainwater flows into the gutter trough and deflects wind-blown debris such as leaves, pine cones, needles and twigs which are often collected in conventional gutters by rainwater. When gutters are clogged, they can no longer hold water which results in overflow which then can lead to structural damage to your home and landscaping.

Leafaway Gutter Protection System gives you the option to select two different colors, to best compliment your roof, fascia and trim colors of your home. One color for the gutter top and one color for the gutter bottom.

## WHY YOU SHOULD CHOOSE LEAFAWAY

- Leafaway's patented one-piece design functions better than add-on gutter covers, gutter hoods and screens by allowing rainwater to cling to the hood and fall into the gutter, while leaves and other debris fall to the ground.
- Leafaway's one-piece hood and gutter are custom manufactured on-site and are formed from aluminum eliminating problems with gutter attachments, rusting and color matching.
- Leafaway gutters are securely fastened to your fascia board with hidden, non-corrosive internal hangers. Unlike other gutter protection systems that are screwed or nailed into your roof causing damage and warranty violations.
- Sur-lock™ internal hanger provides spacing consistency, a streamlined look and prevents sagging. It also allows you to lift up the cover to gain entrance into the gutter.
- Leafaway Gutter Protection System utilizes larger downspouts that will increase water flow up to 50%.
- Available in multiple color options. Different colors can be selected for the top and the bottom to best compliment the roof, fascia and trim color.
- Up to 40% thicker than other add on gutter protection systems. This makes the gutter more durable therefore resists damage to the gutter from falling tree branches and leaning ladders.
